Easy removal of Dents & Door Dings

With Paintless Dent Repair (PDR) door ding protection, it couldn't be easier to remove door dings and small dents without the need for expensive and time consuming body shop repairs.

Using a technique developed by automobile manufacturers, paintless dent repair works from behind the vehicle's exterior to repair damage without sanding, painting, or body fillers. The innovative PDR process uses specialized hand tools to manipulate and flex metal back to its original form. In most cases, there is no evidence that a dent ever existed.

Repairs are fast and friendly. In fact, most paintless dent repairs can be completed in about the time required for an oil change.

*In most cases, paintless dent repair
can be an extremely effective option
for small dents and dings.*
